1 Introduction

1.1 Purpose

This document will outline the functional changes made to this release. It will detail any new features, enhancements to existing functionality and list changes made due to existing functionality not working as expected.

1.2 Audience

This document is primarily for external stakeholders, so they have a clear understanding of what has changed within the application's functionality, compared to previous releases.

It is intended that the content of this document could be shared with external customers, but that most such communication would be through training materials and help files which are beyond the scope of this document.

1.3 Previous Release

The previous release of this product was as follows:

Version: 2.12.14

Date: 21/Feb/24

File Reference: Core CRIS External Release Notes v2.12.15.docx

Effective date: GG 16/10/2024

2   Functionality added in this release.

The following features and enhancements are included in this release:

2.1   RAD-34438 Medica Addendum Issues.

Jira Reference   CRIS-8346

Currently, when we receive a verified report from an external source, the resulting verify triggers are suspended for a minimum of 2-minutes. During this delay, changes could be made to this report and the changes verified. Therefore, when the delay has elapsed, the status of the report is now at 'Verified Addendum (C)', the original verified report is overwritten. Some downstream PACS needs to capture the original report.

Resolution

Firstly, the '**REPORT.SendReportDelaySeconds'** XR setting **MUST** be set to **0** at the appropriate level. It defaults to 120 seconds if not explicitly set. So, set this at trust level.

This will ensure that all verified reports are sent downstream to PACS instantly. Please be aware, these 0 delays are for the verified reports only, there will still be a minimum of 120 seconds for unverified reports should they be configured to be sent to PACS.
